

Assignment 5: Events

General Instructions:

- Add only the missing JavaScript code to the solution.js file inside the js folder.
- Do not modify any other files, including HTML and CSS.
- After updating solution.js, zip the entire folder again and submit it on Omnivox LEA.
- You MUST show your solution to the instructor to receive your grade.

Objective:

In this assignment, you will implement JavaScript functionalities to dynamically update the webpage when the submit button is pressed. You will achieve this by:

- Using **event listeners** to capture user interactions and trigger functions accordingly.
 - **Tip:** Use the **addEventListener** function on elements to perform operations.
- Applying **DOM manipulation** using **createElement** and **createTextNode** to dynamically display submitted information.
- Changing the background color of the **Name** text box:
 - **Yellow** when it is **focused** (clicked inside).
 - **Green** when focus is **lost** (clicked outside).
 - These changes should happen **immediately**.
- Avoid adding **additional buttons** to the HTML file—ensure all interactions happen **through JavaScript**.
- Modify **CSS properties dynamically using JavaScript** by setting **element.style.property = "value"** through the **DOM**.
 - **(Do NOT modify the CSS file)**
- Structure the code efficiently by creating and **reusing functions** where necessary.

Expected Output & Behavior

Figure 1: Initial Page Load

- The page loads with an empty form.
- The **background is yellowish-brown**.
- The form fields are **empty**.
- The **Submit button** is visible.

Figure 2: Focus on the Name Input Field

- When the user **clicks inside** the "Name" text box, its **background color changes to yellow**.
- Other fields remain unchanged.

Figure 3: Blur (Clicking Outside the Text Box)

- When the user **clicks outside** the "Name" text box, its **background color changes to green**.

Figure 4: After Clicking the Submit Button

- When the user **clicks the Submit button**:
 - The entered name, email, and phone number are **appended dynamically** below the form.
 - The displayed values should **match what the user entered**.
 - The form remains unchanged and can be used again for new entries.

Figure 5: Multiple Entries After Clicking the Submit Button

When the user enters different values and clicks the Submit button multiple times:

- Each unique entry (Name, Email, and Phone) is appended dynamically below the form.
- Previously submitted entries remain visible, creating a list of multiple submissions.
- The form remains unchanged and can be used again for new entries.

The screenshot shows a web page with a yellow header containing the title 'Assignment 5'. Below the header is a large yellow section labeled 'Contact Information'. Within this section is a white form with three input fields: a green one containing 'John', a white one containing 'John@example.com', and another white one containing '5143333333'. Below the form is a brown 'Submit' button. To the right of the form, the text 'Mary' is followed by her contact information: 'mary@example.com', '5149999999', 'Dan', 'Dan@example.com', '5146666666', 'John', 'John@example.com', and '5143333333'. The entire page has a black border.
